Education

Frontend developer, Codecool Kft. 2023-2024

Ph.D. in Earth Sciences, Macquarie University (Australia), 2015-2018

Master in Geology, Eötvös Loránd University (Hungary), 2011-2013

Languages

Hungarian – native

English – fluent

German – intermediate

French – basic

Work experience

Research fellow at Institute of Earth Physics and Space Science (2018-2023)
conducted research projects, involving data analysis, interpretation and scientific writing

Volunteer in managing Wordpress-based websites (2019-)
impulzusmusic.com, medicantare.hu, lendulet.ggki.hu

Tech skills

- HTML
- CSS, SASS, Bootstrap
- Javascript
- React.js, Vite, MUI
- Node.js, Express.js
- Git, Github
- REST API integration
- Firebase
- Responsive design
- Clean Code principles

Soft skills

- *attention to detail*
- *adaptability and flexibility*
- *commitment to problem solving*
- *open to continuous learning and self-improvement*
- *creative but critical thinking*
- *work independently or in a team*

Motivation

I worked for over ten years as a research fellow in the field of research and development in earth sciences. During this time, I have learnt to work with large amounts of data, where analytical thinking and an ability to interpret scientific information into comprehensible conclusions was critical. I have gained experience on time management, project management, working both individually and as part of a team, and communicating with colleagues in various disciplines and nationalities. I have worked on websites part-time as a hobby, and developed an interest in designing user-friendly, informative, and creative pages. My motivation to change career and switch to web development was to combine logic and problem solving with creativity and innovation. I am passionate about finding practical solutions for meeting the needs of project requirements in building web applications.
